2023

Introduction

1. We have chosen **Student Management System** as Group 06. In this system I'm creating **Add Student Details Form**. For this, Java Language is used and coded in Netbean.
2. In this program using console-based input/output. It allows the user to:-
 1. Add New Student Details
 2. View All Store Student
 3. Search A Student Id

Key Features Used

1. Arrays – To store student data (Id , FirstName , LastName , Area , Gender and Birthdate)
2. if and if else statement – for checking conditions like limits or search results.
3. switch statement – for menu-based control panel.
4. while loop – to repeatedly show the menu until user exits.
5. user defined methods – AddStudent() , ViewStudent() and SearchStdent() keep the code modular.

It Work Like This ,

The program keeps running in a loop.

The user chooses form the menu :

----- Student Control Panel -----

1. Add Student Details
2. View All Students Details
3. Search Student by ID
4. Exit

Each action is handled by a dedicated method.
